# About the State of Salzburg

According to the Austrian Federal and National Constitution, the State of Salzburg is a regional authority, funding or providing numerous services for its citizens in the Austrian Federal State of Salzburg.

Landesinformatik Salzburg (Salzburg State IT) is the local government office responsible for government IT in this context.

# Detecting, managing and preventing IT risks in government authorities.

Government services are based on comprehensive information technology. The vast IT landscapes of any organisation (both public and private) are also always subject to a variety of IT risks. It is necessary to recognise these risks promptly, manage them and prevent them, so that the many services rendered daily by the different state authorities can be safely provided.

Reliable IT risk detection thanks to the managed service of the European market leader Radar Cyber Security.

The State of Salzburg has trusted Radar Cyber Security for IT risk management for a number of years: The technology in use includes log data analytics (LDA), network behavior analytics (NBA) and vulnerability management & compliance (VMC). The services of the Radar Cyber Security analysts are based on these modules and on both the correlation and cross-correlation of their findings. They assess the findings of automated risk detection and prioritise them for further processing by the staff of Salzburg State IT.

# Radar Cyber Security's other effect on risk management processes.

Radar Cyber Security have an integrated approach that not only provides effective and efficient IT risk protection, it also has a noticeably positive effect on the risk management processes of an organisation (including patch management or incident response). The facts and figures provide objective substantiation of the optimisation of processes and resources in this area. An effect that it was also possible to achieve at Salzburg State IT.

CYBER SECURITY

Safeguard your  
digital journey.

**Radar Cyber Security is Europe's leading technology company in the field of Detection & Response.** In focus: The early detection of IT and OT security risks for corporations and public authorities offered as a Solution or a Managed Service. The cutting-edge, inhouse-developed technology platform is the basis used for building up a client's Cyber Defense Center (CDC) or it is used in combination with our expert analysts, documented processes and best practices as CDC as a Service. The result: Highly effective and efficient improvement of IT security and IT risk management, continuous IT and OT security monitoring and an overview of security-related information throughout the entire IT and OT landscape of an organization.
